## **DETAILED ACTION**

### ***Withdrawal of Allowable Subject Matter***

1. The indicated allowability of claims 12-14, 16 and 18 is withdrawn in view of the reference(s) to Roe *et al.* (US 6,627,786 B2; hereinafter “Roe”). Rejections based on the newly applied reference(s) follow.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting

ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 12-14, 16 and 18 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 6,627,786 in view of Brunner (US 5,681,298 A; hereinafter "Brunner").

Roe claims every structural limitation of the instant invention except for a temperature change member and substance that has a negative heat of solution (is endothermic) and is responsive to contact with urine to absorb heat (see especially, claims 2 and 9).

Brunner teaches a diaper (20) that has a urine-sensitive endothermic temperature change member (22) located immediately under a topsheet (58)(col. 5, line 23-col. 6, line 56). This element causes a cooling sensation to indicate to a wearer of the article that urination has occurred.

Art Unit: 3761

**FIG. 2**

At the time of the invention, it would have been obvious for one of ordinary skill in the art to add Brunner's wetness sensation substance to the wetness sensation member of Roe in order to provide an art recognized suitable means of alerting a wearer of the device that urination has occurred.
